CrimsonLogic Managed Security Services
Cost-effective cyber security protection

Protecting Your Business

CrimsonLogic Managed Security Services is a suite of products and services designed to protect your business from cyber security threats. With best-in-class products and services and a proven team of cyber security experts, our Managed Security Services are able to detect threats in real-time and escalate suspected activities promptly.

Securing Your Data

With the ever-changing cyber security landscape, security is no longer an optional investment but an indispensable business requirement that every organisation needs to address, regardless if you are a Small, Medium Enterprise (SME) or a Multi-National Corporation (MNC). Unsecured networks can cause not only data theft, but also malicious intrusions which can paralyse your business operations. The lightning pace of change in the cyber security landscape can also easily make your existing security systems obselete overnight.

Our Approach

Installation
A security appliance is installed at your network to collect and transfer all event logs securely to our Managed Security Services centre for analysis and monitoring.

Profiling
Our team of proven cyber security experts profiles normal activities against suspicious ones.

Monitoring
Suspected incidents trigger notifications to anticipate cyber threats before they materialise.
Analysis
Our team of proven cyber security experts examines your network traffic to sieve out and block illegitimate traffic.

Report
You are updated on the status of your security system through customisable monthly reports.

Physical security appliance or cloud security deployment

CrimsonLogic Managed Security Services - 24x7 monitoring

By subscribing to our Managed Security Services, you do not need to invest in costly in-house cyber security systems and personnel. With our team of proven cyber security experts monitoring your systems 24x7, you can focus on your core business with a peace of mind.
